jQuery getJSON() Method

‹ jQuery AJAX Methods

Example

Get JSON data using an AJAX request, and output the result:

```
$("button").click(function(){
    $.getJSON("demo_ajax_json.js", function(result){
        $.each(result, function(i, field){
            $("div").append(field + " ");
        });
    });
});
```

Try It Yourself »

Definition and Usage

The getJSON() method is used to get JSON data using an AJAX HTTP GET request.

Syntax

```
$(selector).getJSON(url,data,success(data,status,xhr))
```

Parameter	Description
url	Required. Specifies the url to send the request to

success(data,status,xhr)	Optional. Specifies the function to run if the request succeeds Additional parameters: • *data* - contains the data returned from the server. • *status* - contains a string containing request status ("success", "notmodified", "error", "timeout", or "parsererror"). • *xhr* - contains the XMLHttpRequest object
